

PROCTER CAST STONE  
CORPORATE SOCIAL RESPONSIBILITY

Manufacture | Install | Aftercare | Since 1740

## ABOUT PROCTER CAST STONE

Procter Cast Stone is part of Procter Bros – a family owned business established in 1740. Across our business and in all of our divisions, we put great emphasis on both high quality products and outstanding customer service.

At Procter Cast Stone we manufacture, supply and install high quality standard and bespoke Cast Stone products for projects throughout the UK. These are used for a very wide range of residential, retail, religious, self-build, ornamental and restoration applications.

**Procter Bros is committed to promoting and delivering a sustainable and responsible business.**

Our aim is to contribute to sustainability through the promotion of sustainable and responsible business practices to help create a positive environmental, social and economic impact on all our activities and those of our clients and partners.

## OUR COMMITMENT

- As a company, we have a duty to be fully informed about our manufacturing processes and the impact they can have on the environment. We strive to cut down the amount of waste we send to landfill by shredding all paper waste, and donate this to an Animal Welfare charity. All other waste that can be recycled is recycled. Other scrap waste is resold so that it can be reused and re-enter the supply chain.
- We have recently installed a biomass boiler system to heat our factory, thus reducing the exertion of fossil fuels.
- Training and professional development is a key business priority. We are committed to offering placements each year to new apprentices and employees across all service areas are given the chance to become professionally qualified in their field. Procter supports them throughout this process, providing funding for the courses and paid study leave for coursework and revision.
- We believe being a responsible employer should extend to our vehicle fleet. We offer a flexible company car scheme which includes the use of low emission cars together with electric hybrid vehicles available as a company car option. Charging points have been installed on company premises to help reduce CO2 emissions and we encourage employees to opt for lower-emitting vehicles.
- Our policy is to reuse technical equipment and furniture in different ways to reduce landfill and we also utilise free recycling opportunities locally if items are to be discarded.
- We are committed to conducting our business activities in a manner that prevents the injury and ill health of our people and others. We fulfil all current and future health, safety and environmental legal obligations that apply to us wherever we operate.
